

GenScript cPass™ SARS-CoV-2 Neutralization Antibody Detection Kit

FDA EUA approved

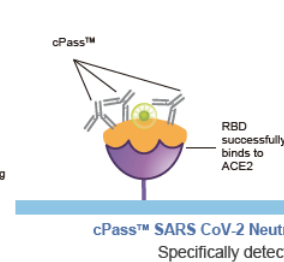

- Detects antibodies in just 1 hour
- 96-well ELISA format
- Used with serum and plasma samples
- Comes with positive and negative controls
- Applications for both recovering and vaccinated patients

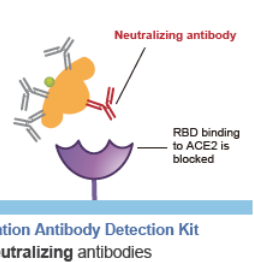

Currently Available Antibody Tests

cPass™ Negative Test

cPass™ Positive Test

The cPass™ kit detects circulating neutralizing antibodies against SARS-CoV-2 that block the interaction between the receptor binding domain (RBD) of the viral spike glycoprotein with the ACE2 cell surface receptor. This kit would be instrumental in vaccine and therapeutic development, and will also help in current COVID-19 investigations of sero-prevalence, assessment of herd immunity, longevity of protective immunity, and tracking infection in animals.
