Proteinase K

Shipping: On Dry/Blue Ice

Catalog numbers

Batch No.: See vial

BIO-37037: 100mg

BIO-37039: 1000mg

Store at -20°C

Storage and stability:

Proteinase K is shipped on dry/blue ice. On arrival store at -20°C for optimum stability.

When stored under the recommended conditions and handled correctly, full activity is retained until the

Safety precautions:

Harmful if swallowed. Irritating to eyes, respiratory system and skin. Please refer to the material safety data sheet for further information.

39450-01-6

Xn: HARMFUL

Quality control specifications:

Proteinase K is extensively tested for activity prior to release.

Notes:

Research use only

Description

Proteinase K is an enzyme used to digest most proteins in molecular biological techniques. The enzyme may be used at 56°C for up to 4 hours, or 37°C for overnight incubations. Proteinase K is available as a powder or as a stabilized stock solution (20mg/ml). Proteinase K solution is stabilized with a specially formulated buffer, and can be used directly from the freezer.

Features

- Broad-spectrum serine protease
- Active under denaturing conditions
- Stable at high temperatures
- Molecular biology grade
- Available as powder and stabilized stock solution

Applications

- Inactivation of RNases/DNases during nucleic acid extraction
- Protein modification
- General protein digestion
- Determination of enzyme localization

Characteristics

EC Number:	3.4.21.14	
Physical Appearance:	Lyophilized Powder. Lyophilized from calcium acetate	
Molecular Weight:	28,500	
Activity (Dry Weight):	≥30.0 units/mg	
Specific Activity:	≥40.0 units/mg protein	
Solubility:	50mM Tris-HCI, 2mM calcium acetate, pH 8.0	
Contaminants:	RNase Activity: No detectable ribonuclease activity detected with MS2RNA after 6-hour incubation at 37°C	
	DNase Activity : No detectable nicking activity detected with pBR322 after 6-hour incubation at 37°C	
Unit definition:	One unit is defined as the amount of enzyme that will liberate 1.0µmol of tyrosine per minute at 37°C, pH 7.5.	

Recommendations for Use:

- Dissolve to 20mg/ml in 50mM Tris-HCl, 2mM calcium acetate.
- Proteinase K may be used at 56°C for up to 4 hours, or 37°C for overnight incubations
- Proteinase K has an optimal pH of 7.5-12.0
- To remove common contaminants from nucleic acid preparations use at a working concentration of 5mg/ml
