ROCKETBOX 2.0

UP TO 453 PRE-ROLLS PACKED IN 60 SECONDS

The STM RocketBox 2.0 pre-roll machine is designed to maximize pre-roll joint production while significantly decreasing labor costs. Capable of rolling up 144 to 453 pre-rolled cones per cycle, the RocketBox 2.0 is the pinnacle of pre-roll machines.

- **Smart Density Software to Measure & Achieve Weight Accuracy**
- **Variable Frequencies of Vibration for Even Filling & Packing**
- **Built-In Training Mode with Tutorials**
- **Precise, Consistent and Repeatable Results**
- **Compatible with STM Weighing & Closing Modules**

**1-YEAR
WARRANTY**

**OSHA
COMPLIANT**

**MADE IN
USA**

WHY THE ROCKETBOX?

HIGHER OUTPUT, FASTER ROI

For start-ups to global cannabis enterprises, the RocketBox produces tens of thousands of pre-rolls per day and is the all-in-one asset that can grow and scale with your business. With quicker cycles, you can decrease labor costs, meet demands, and accept new or larger contracts, all while increasing profit margins and ROI.

SMART ROCKETBOX TECHNOLOGY

Featuring smart density software and 3 fully adjustable settings across a 7" integrated touch screen, the RocketBox 2.0 is the most advanced pre-rolled cone filling machine on the market. Your team can produce thousands of high quality, evenly packed pre-rolls each day.

TRAINING AT YOUR FINGERTIPS

Enable your team to learn from the experts and get dialed-in quickly with step-by-step tutorials in training mode and exclusive access to the STM Client Portal. In an industry ripe with turnover, onboarding employees has never been more economical.

Bottom Tray Plastic Cones and Funnels

WHAT CONES ARE COMPATIBLE?

King Size Standard for $\pm 1g$

TRAY NAME "109 MM"

RANGE 1g

TOTAL LENGTH 109 MM

FILTER 26 \pm MM

TOP OPENING 12.65 \pm MM

72-COUNT TRAYS ONLY
ADAPTER REQUIRED FOR ROCKETBOX

Cigarette / Reefer / 98 Slim Standard for $\pm .5g$

TRAY NAME "Cigarette/Reefer"

RANGE .5g - .7g

TOTAL LENGTH 83-98 MM

FILTER 20-30 \pm MM

TOP OPENING 8-9 MM

1-1/4" / 98 Special Standard for $\pm .5 - .75g$

TRAY NAME "84/98 MM"

RANGE .5g - .75g

TOTAL LENGTH 84-98 MM

FILTER 26 \pm MM

TOP OPENING 10-10.5 \pm MM

72-COUNT TRAYS ONLY
ADAPTER REQUIRED FOR ROCKETBOX

Dogwalker Standard for $\pm .35g$

TRAY NAME "Dogwalker"

RANGE .25g - .5g

TOTAL LENGTH 70 MM

FILTER 30 \pm MM

TOP OPENING 10.3 \pm MM

To alternate between weights within these ranges, operators may raise/lower the height of the Top Tray, adjust grind size, bulk density, and/or machine cycle time. Papers used should at minimum match the dimensions listed for each tray's length and opening to achieve optimal results. Both the Top Tray's metering system and RocketBox density software are designed to work with standard sizes (84/98 MM & 109 MM), therefore custom sizes such as the Dogwalker & Cigarette/Reefer trays will require additional dialing-in.

COMPLETE PRE-ROLL SOLUTIONS

MODULAR SYSTEMS FOR FACILITIES OF ALL SIZES

GRIND.

PACK.

WEIGH.

FOLD.

Step 1.

Grind and prep flower with the Revolution.

Step 2.

Add papers, then place trays into RocketBox. Add material to fill and pack.

Step 3.

Place filled tray onto LaunchPad for a quick QC on weights.

Step 4.

Add tray into the Closer and press Go. Folded joints are dispensed for easy collection.

STM PRE-ROLL BUNDLES

The perfect bundle to get your facility started in optimal pre-roll prep and production.

MINI PRE-ROLL BUNDLE \$13,200

FREQUENTLY ASKED QUESTIONS

HOW DOES THE STM ROCKETBOX WORK?

The STM RocketBox utilizes patent-pending PLS technology that allows you to control the transmission and intensity of the vibrations that fill and pack your pre-rolls. By concentrating these vibration frequencies in the bottom [cone holding] tray, you can adjust how your material moves and packs into each cone for ultimate control of your product. Versus shaking and tapping to pack, this method vibrates the material itself, allowing it to fill into the cone evenly, layer-by-layer - avoiding air pockets, weak necks and other inconsistencies.

Eliminate the guesswork with the RocketBox 2.0. To begin with a new material type, select your cone size and desired weight variance on the start up screen. STM's density software will provide you with a target material density in order to achieve the highest success rate based on your selected parameters. Next, the program will prompt you to enter your measured density and populate a pass or fail icon. If your density is too high or low, instructions are provided. If your density passes, you may move onto the last screen to set your operational settings (shaker speed, PLS pressure and cycle time) and start producing! You may return to the main screen when you are ready to use new material.

HOW DOES THE ROCKETBOX REDUCE MY LABOR?

With limited customization options, competitors joints often require tedious manual work post-cycle (hand-packing, tamping, etc.) prior to entering the closing stage. Alongside 51% faster output than its closest competitor, the RocketBox allows the operator to customize each cycle in order to accommodate different material types, reduce manual fixes and speed up the closing process.
