

H200 Sequential Sterilization Wrap

The Choice of Sterile Processing Professionals for *More Than 30 years.*

Since 1978, HALYARD* Sequential Sterilization Wrap, made of strong reliable SMS nonwoven fabric, has been helping keep sterilized instruments and supply sets ready for use at a moment's notice. The company pioneered the development of SMS fabric and today is one of the largest global suppliers. HALYARD* Sequential Sterilization Wrap was invented in the US and is still fully manufactured here, in our own facilities.

- Tear, flame, lint and abrasion-resistant
- Powerguard* technology for enhanced microbial barrier protection
- Pre-vacuum steam sterilant penetration
- Ethylene oxide (eo) sterilant penetration and residuals
- Maintenance of package integrity (mpi) to meet fda requirements
- Class 1 flammability rating
- Low linting
- Made in the USA

For-Linen towels, packs and gowns, light basin sets and single instruments. Total weight = 3 - 6 lbs.

Thomas No.	Mfr. No.	Description	Qty/Size
21A00H574	68012	H200 Sterilization Wrap, 12in. X 12in. (30cm X 30cm)	1000/Cs
21A00H575	68015	H200 Sterilization Wrap, 15in. X 15in. (38cm X 38cm)	1000/Cs
21A00H576	68018	H200 Sterilization Wrap, 18in. X 18in. (45cm X 45cm)	1000/Cs
21A00H577	68024	H200 Sterilization Wrap, 24in. X 24in. (60cm X 60cm)	500/Cs
21A00H578	68030	H200 Sterilization Wrap, 30in. X 30in. (76cm X 76cm)	300/Cs
21A00H579	68036	H200 Sterilization Wrap, 36in. X 36in. (91cm X 91cm)	300/Cs
21A00H580	68040	H200 Sterilization Wrap, 40in. X 40in. (101cm X 101cm)	250/Cs
21A00H581	68048	H200 Sterilization Wrap, 48in. X 48in. (121cm X 121cm)	100/Cs
21A00H582	68054	H200 Sterilization Wrap, 54in. X 54in. (137cm X 137cm)	100/Cs
21A00H583	68072	H200 Sterilization Wrap, 54in. X 72in. (137cm X 182cm)	100/Cs

HALYARD* Sequential Sterilization Wrap

PHYSICAL PROPERTIES TEST METHODOLOGY AND RESULTS FOR HALYARD* H200 SEQUENTIAL STERILIZATION WRAP

Test	Methodology	Interpretation of Results	HALYARD* H200 Sequential Sterilization Wrap Results ¹
Bacterial Filtration Efficiency	Staphylococcus aureus particles are aerosolized and sprayed onto the fabric. Results are reported as percent efficiency and correlate with the ability of the fabric to resist bacterial penetration. ^{11,12}	Higher numbers in this test indicate better barrier efficiency.	99.7% ¹³
Grab Tensile	Force is applied to the test fabric until the fabric breaks. The force required to break the fabric – grab tensile load – is measured. Results are reported as pounds of force required to break the fabric. The lower result of CD or MD direction is reported. ¹⁴	Higher numbers indicate a stronger fabric.	29.1 lbs ¹⁵
Resistance to Linting	In a controlled environment, a 9"X9" sample of fabric is clamped inside a Gelbo Dry Particle Generator. It is then flexed one time every second for a period of five minutes. Particles generated during the test period are counted using a laser particle counter. Results are expressed as the average number of lint particles generated greater than 10 microns in size. ¹⁶	Lower numbers in this test indicate less lint, which is desirable in the operating room environment.	4 particles ¹⁵
Hydrostatic Pressure	The fabric sample is clamped onto the bottom of a vertical column, into which water is poured. When leakage is observed on the underside of the fabric, the amount of water in the column is measured. Results are expressed in millibar (mbar) of water pressure a fabric can repel before leaking. ¹⁷	A higher number indicates greater resistance to water penetration.	77.4 mbar ¹⁵
Flammability	The fabric sample is held at a 45° angle and a standardized flame is applied to the bottom edge of the specimen for 30 seconds or until sustained ignition occurs, whichever comes sooner. Four classes are recognized by the National Fire Prevention Association (NFPA) for fabrics used for clothing: Class 1: Slow burning fabrics which have a flame spread time of 20 seconds or more. Class 2: Moderately flammable fabrics which have a flame spread time of 8 to 19 seconds inclusive. Class 3: Relatively flammable fabrics which have a flame spread time of 3 to 7 seconds inclusive. Class 4: Dangerously flammable fabrics which have a flame spread time of less than 3 seconds. Results are reported by classification and seconds until sustained ignition. ¹⁷	A lower class (longer time) indicates a more flameresistant fabric.	Class 1 (30 sec.) ¹⁵
