

Enabling OTC tests to be FDA compliant

The FDA requires a “mobile application or website to facilitate results reporting” as a condition for OTC test developers to gain and keep EUA. Point of Care Workflow Services by ImageMover enables any OTC tests to be FDA compliant. Individuals can take any OTC test, from their own home, and quickly receive a record of the verified result they can share with employers, event venues, or travel providers. The results are then automatically reported to health authorities.

Mobile platform fulfills FDA reporting requirements

- Mobile app and web interfaces supported
- API connection to state and federal CDC platform
- OTC and point-of-care test agnostic (dozens currently active)

Automated Verification Service for accurate results

- Test is rapidly, asynchronously verified
- Remove test result interpretation bias from self-administered tests
- Verified results provided to employer if desired

Compatible with visually-read EUA tests

- Employees can self-submit test result photos
- Much less expensive than proctored options
- Additional FDA clearances are not required

“The ImageMover app helps resolve a major administrative reporting burden... and further strengthens the advantages of using a digitally read test like the BD Veritor™ Plus System.”

Dave Hickey

President of Life Sciences
BECTON, DICKINSON AND COMPANY

“Adding ImageMover to our K–12 student testing process was a game-changer. ImageMover is configured to address the specific requirements of our testing process.”
